DAY:7

FOR LOOP STATEMENT

A for loop is a looping statement used to execute a block of code repeatedly 😊

It helps avoid writing the same code many times.

SYNTAX:

```
for(initialization; condition; increment/decrement)

{

    // code

}
```

EXAMPLE:

Package forloop

```
class Full_stack

{

    public static void main(String[] args)

    {

        for(int i = 1; i <= 5; i++)

        {

            System.out.println("Hello");

        }

    }

}
```

FOR LOOP AND IF STATEMENT:

Package foorloop

```
class Demo
{
    public static void main(String[] args)
    {
        for(int i = 1; i <= 5; i++)
        {
            if(i % 2 == 0)
            {
                System.out.println(i + " is Even");
            }
        }
    }
}
```
